

Rodless Cylinder for Vacuum

Series *CYV*

ø15, ø32

**Air cylinder for transfer
in vacuum environments ($1.3 \times 10^{-4}\text{Pa}$)**

**Simplifies and reduces
the size of equipment**

Since the cylinder can be installed inside a vacuum chamber, it contributes to simplifying and reducing the size of a transfer system.

Air cylinder for transfer

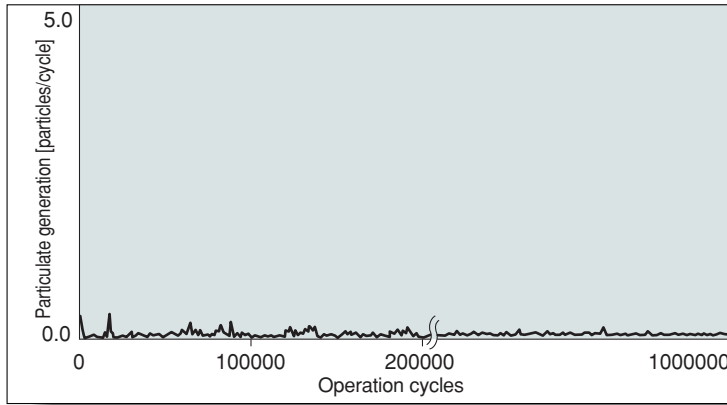

Rodless Cylinder for Vacuum

Series CYV

ø15, ø32

Low particulate generation

Average particle generation (particles >0.1) is 0.1 particles/cycle. (Atmospheric conditions)

Note 1) This data indicates deterioration with age of the average number of particles per operation under the following test conditions.

<Test conditions>

- Cylinder: CYV32-100
- Average speed: 100mm/s
- Measurement environment: Operation in the atmosphere after baking at 150°C for 48 hours.
- Work piece weight: 5kg

Note 2) This data is considered typical but not guaranteed.

Note 3) A particulate generation test has been conducted in a vacuum environment of 10^{-5} Pa.

Low particulate generation

1

Non-contact construction

There is no particulate generation due to friction, since the construction does not allow contact between the cylinder tube's exterior surface and the slide table's internal surface.

Special cylinder tube Long strokes (Max. 700mm)

A special cylinder tube using extruded aluminum material is employed. No deflection or contact occurs even for long strokes, since the cylinder is rigidly attached to the base and the slide table is independently supported by a linear guide.

Low particulate generation

2

Stainless steel linear guide & low particulate generation vacuum grease

Particulate generation from the linear guide unit has been reduced with the use of a stainless steel linear guide and low particulate generating vacuum grease.

Low particulate generation

3

Reduced initial particulate generation

Cleaned, assembled, inspected and first-stage packaged in a clean environment.

Low particulate generation

4

Low particulate generation at the stroke ends

Particulate generation has been reduced at the stroke ends by reducing impact using a sine cushion and by stopping the stroke using an internal stopper.

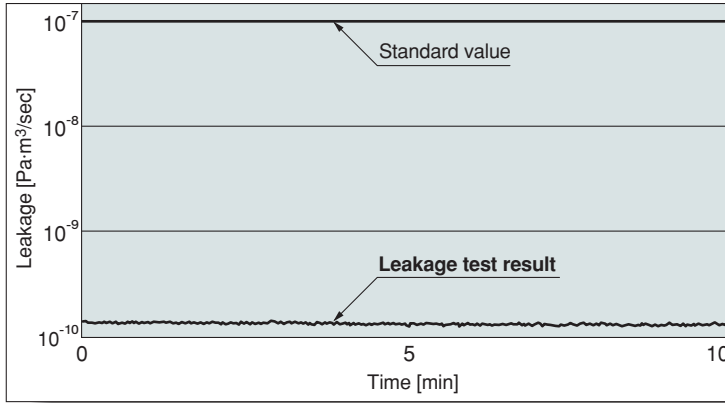

in vacuum environments (1.3 x 10⁻⁷Pa)

Carefully designed for low particulate generation, low leakage, and low outgassing.

Low leakage

Leakage: 1.3 x 10⁻⁷ Pa·m³/sec or less
(at normal temperatures, excluding gas permeation)

Note 1) The data indicates the leakage measured in a vacuum environment of 10⁻⁷Pa.

Note 2) The leakage test result shown is based on a test conducted for 10 minutes after the cylinder was pressurized with helium at 0.1 MPa.

Note 3) This data is considered typical but not guaranteed.

Low leakage 1

Employs a magnetically coupled rodless cylinder with no air leakage from moving parts.

Low leakage 2

O-ring seals separate vacuum and atmosphere.

Static O-ring seals are used for all the seals between vacuum and atmosphere.

Note 1) The chart above shows the leakage test results based on a test conducted using this cylinder construction.

Note 2) To allow fine stroke adjustments, O-ring seals are installed to separate vacuum and atmosphere. Consult SMC if the sealing method needs to be altered.

Reduced outgassing

Reduced outgassing 1

Reduction of outgassing due to surface treatment

All the external parts (made of aluminum alloy) such as the body and slide table are electroless nickel plated.

Furthermore, external magnets are coated with titanium nitride.

Note 1) Consult SMC if other specifications for surface treatment are required.

Reduced outgassing 2

Resin materials eliminated

Laser marking is employed for the model designation.

Fine adjustments at the end of the stroke

Fine adjustments between -2 to 0mm can be made on one side (-4 to 0mm for both sides).

Rodless Cylinder for Vacuum

Series CYV

How to Order

CYV 15 — 200

Rodless cylinder
for vacuum

• Standard stroke

• Bore size

15	15mm
32	32mm

Bore size (mm)	Standard stroke (mm)
15, 32	100, 150, 200, 250 300, 350, 400, 450 500, 600, 700

Specifications

Bore size (mm)	15	32
Operating environment pressure	Atmosphere to 1.3×10^{-4} Pa (ABS)	
Operating atmosphere ^{Note 1)}	Air and inert gases	
Fluid ^{Note 1)}	Air and inert gases	
Action	Double acting	
Proof pressure	0.5MPa	
Operating pressure range	0.05 to 0.3MPa	
Leakage	1.3×10^{-7} Pa·m ³ /sec or less (at normal temperatures, excluding gas permeation)	
Maximum baking temperature ^{Note 2), Note 3)}	100°C	
Ambient and fluid temperature	-10 to 60°C	
Piston speed ^{Note 4)}	50 to 300mm/s	
Stroke adjustment	-2 to 0mm on each side (-4 to 0mm total)	
Cushion	Sine cushion (Air cushion)	
Port size	5/16-24UNF	7/16-20UNF
Lubrication	Vacuum grease for linear guide unit and inside the cylinder tube	

Note 1) Air is recommended as the operating atmosphere and fluid, as the use of inert gases may affect the product life.

Note 2) Baking is limited to baking before cylinder operation. Cylinder operation should be with a temperature range of -10 to 60°C.

Note 3) Do not allow the baking temperature to exceed 100°C.

Note 4) The piston speed listed above is the maximum piston speed. When the slide table on the stroke edge starts moving, it will take approximately 0.5 seconds (each end) or 1 second (both ends) to slip out of the cushion stroke.

Weights

Model	Standard stroke (mm)

Note) Refer to "Cushion Effect (Sine Cushion) and Stroke Adjustment" under Specific Product Precautions on page 10.

Series CYV Model Selection 1

Design Parameters 1

The allowable load mass moment differs depending on the work piece mounting method, cylinder mounting orientation and piston speed.
To determine whether or not the cylinder can be operated, do not allow the sum ($\Sigma\alpha_n$) of the load factors (α_n) for each mass and moment to exceed "1".

$$\Sigma\alpha_n = \frac{\text{Load mass (m)}}{\text{Max. load mass (m max)}} + \frac{\text{Static moment (M)}}{\text{Allowable static moment (M max)}} + \frac{\text{Dynamic moment (Me)}}{\text{Allowable dynamic moment (Me max)}} \leq 1$$

Load mass

Max. load mass (kg)

Model	m max
CYV15	1
CYV32	5

Moment

Allowable moment
(Static moment/Dynamic moment)

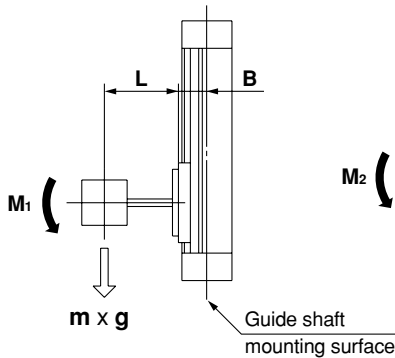

Model	(N·m)		
	M1	M2	M3
CYV15	0.3	0.6	0.3
CYV32	3	4	3

Static Moment

Moment generated by the work piece weight even when the cylinder is stopped

■ Pitch moment

$$M_1 = m \times g \times (L + B) \times 10^{-3}$$

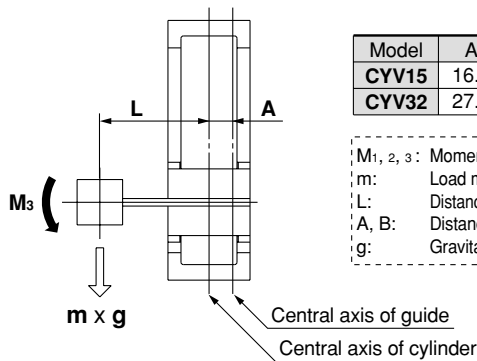

■ Roll moment

$$M_2 = m \times g \times (L + B) \times 10^{-3}$$

■ Yaw moment

$$M_3 = m \times g \times (L + A) \times 10^{-3}$$

Model	(mm)	
	A	B
CYV15	16.5	25.5
CYV32	27.0	48.0

M_{1, 2, 3}: Moment [N·m]
m: Load mass [kg]
L: Distance to load center of gravity [mm]
A, B: Distance to guide shaft [mm]
g: Gravitational acceleration [9.8m/s²]

Dynamic Moment

Moment generated by the load equivalent to impact at the stroke end

$$We = 5 \times 10^{-3} \times m \times g \times U$$

We: Load equivalent to impact [N]
m: Load mass [kg]
U: Max. speed [mm/s]
g: Gravitational acceleration [9.8m/s²]

■ Pitch moment

$$Me_1 = 1/3 \cdot We(L + B) \cdot 10^{-3} *$$

* Average load coefficient

■ Yaw moment

$$Me_3 = 1/3 \cdot We(L + A) \cdot 10^{-3} *$$

* Average load coefficient

Model	(mm)	
	A	B
CYV15	16.5	25.5
CYV32	27.0	48.0

Series CYV Model Selection 2

Selection Calculation

The selection calculation finds the load factors (α_n) of the items below, where the total ($\Sigma\alpha_n$) does not exceed "1".

$$\Sigma\alpha_n = \alpha_1 + \alpha_2 + \alpha_3 \leq 1$$

Item	Load factor α_n	Note
1. Max. load mass	$\alpha_1 = m/m \text{ max}$	Review m . $m \text{ max}$ is the maximum load mass.
2. Static moment	$\alpha_2 = M/M \text{ max}$	Review M_1, M_2, M_3 . $M \text{ max}$ is the allowable moment.
3. Dynamic moment	$\alpha_3 = Me/Me \text{ max}$	Review Me_1, Me_3 . $Me \text{ max}$ is the allowable moment.

Calculation Example

Operating conditions

Cylinder: CYV32
 Mounting: Horizontal wall mounting
 Maximum speed: $U = 300$ [mm/s]
 Load mass: $m = 1$ [kg] (excluding mass of the arm section)
 $L_1 = 50$ [mm]
 $L_2 = 50$ [mm]

Item	Load factor α_n	Note
1. Maximum load mass 	$\alpha_1 = m/m \text{ max}$ $= 1/5$ $= \mathbf{0.20}$	Review m .
2. Static moment 	$M_2 = m \cdot g \cdot (L_1 + B) \cdot 10^{-3}$ $= 1 \cdot 9.8 \cdot (50 + 48) \cdot 10^{-3}$ $= 0.96$ [N·m] $\alpha_2 = M_2/M_2 \text{ max}$ $= 0.96/4$ $= \mathbf{0.24}$	Review M_2 . Since M_1 and M_3 are not generated, review is unnecessary.
3. Dynamic moment 	$We = 5 \times 10^{-3} \cdot m \cdot g \cdot U$ $= 5 \times 10^{-3} \cdot 1 \cdot 9.8 \cdot 300$ $= 14.7$ [N] $Me_3 = 1/3 \cdot We \cdot (L_2 + A) \cdot 10^{-3}$ $= 1/3 \cdot 14.7 \cdot (50 + 27) \cdot 10^{-3}$ $= 0.38$ [N·m] $\alpha_{3a} = Me_3/Me_3 \text{ max}$ $= 0.38/3$ $= \mathbf{0.13}$	Review Me_3 .
	$Me_1 = 1/3 \cdot We \cdot (L_1 + B) \cdot 10^{-3}$ $= 1/3 \cdot 14.7 \cdot (50 + 48) \cdot 10^{-3}$ $= 0.48$ [N·m] $\alpha_{3b} = Me_1/Me_1 \text{ max}$ $= 0.48/3$ $= \mathbf{0.16}$	Review Me_1 .

$$\begin{aligned} \Sigma\alpha_n &= \alpha_1 + \alpha_2 + (\alpha_{3a} + \alpha_{3b}) \\ &= 0.20 + 0.24 + (0.13 + 0.16) \\ &= \mathbf{0.73} \end{aligned}$$

The result $\Sigma\alpha_n = 0.73 \leq 1$ allows operation.

CYV15 (M2)

CYV15 (M3)

CYV32 (M1)

CYV32 (M2)

CYV32 (M3)

Vertical Operation

When using in vertical operation, prevention of work piece dropping due to breaking of the magnetic coupling should be considered. The allowable load mass and maximum operating pressure should be as shown in the table below.

Model	Allowable load mass mv (kg)	Maximum operating pressure Pv (MPa)
CYV15	1	0.3
CYV32	5	

Intermediate Stops

The cushion effect (smooth start-up, soft stop) is applied only before the stroke end in the stroke ranges indicated in the table below.

The cushion effect (smooth start-up, soft stop) is not available an intermediate stop or return from an intermediate stop using an external stopper, etc.

When using an intermediate stop with the above information taken into account, implement measures to prevent particulate generation and set the operating pressure to no more than 0.3MPa.

Cushion stroke

Model	Stroke (mm)
CYV15	25
CYV32	30

Series CYV Specific Product Precautions 1

Be sure to read before handling.

Handling

⚠ Caution

1. Open the inner package of the double packaged clean series product inside a clean room or other clean environment.
2. Do not install a cylinder with bare hands. Outgassing characteristics can be degraded.
3. Perform parts replacement and disassembly work inside the chamber after exhausting compressed air in the piping to the outside of the clean room.

Mounting

⚠ Caution

1. Take care to avoid striking the cylinder tube with other objects or handling it in a way that could cause deformation.

The cylinder tube and slider units have a non-contact construction. For this reason, even a slight deformation or slippage of position can cause malfunction and loss of durability, as well as a danger of degrading particulate generation characteristics.

2. Do not scratch or gouge the linear guide by striking it with other objects.
3. Since the slide table is supported by precision bearings, do not apply strong impacts or excessive moment when mounting work pieces.
4. The cylinder can be operated by directly applying a load within the allowable range. However, careful alignment is necessary when connecting to a load with an external guide mechanism.

Since displacement of the alignment increases as the stroke becomes longer, consider a connection method that can absorb the displacement and does not cause interference at any point within the stroke. Also, operate with due consideration of measures against particulate generation.

5. Be sure to operate the cylinder with the plates on both sides secured.

Avoid applications in which the slide table or only one plate is secured.

6. Do not use until you verify that the equipment can be operated properly.

After mounting or repair, connect the air supply and electric power, and then confirm proper mounting by performing appropriate function and leakage tests.

7. Instruction manual

Mount and operate the product after thoroughly reading the manual and understanding its contents. Also, store it where it can be referred at any time.

Operation

⚠ Caution

1. The maximum operating pressure for the vacuum rodless cylinder is 0.3MPa

If the maximum operating pressure of 0.3MPa for the vacuum rodless cylinder is exceeded, the magnetic coupling can be broken, causing a danger of malfunction or degradation of particulate generation characteristics, etc.

Operation

⚠ Caution

2. When used for vertical operation, take precautions against possible dropping due to separation of the magnetic coupling.

When used for vertical operation, use caution as there is a possibility of dropping due to separation of the magnetic coupling if a load (pressure) greater than the allowable value is applied.

3. Do not operate with the magnetic coupling out of position.

If the magnetic coupling is out of position, push the external slider (or the piston slider by using air pressure) back to the proper position at the stroke end. (When pushing the external slider, do not push it with bare hands.)

4. Do not apply lubricant, as this is a non-lube product.

The interior of the cylinder is lubricated at the factory, and lubrication with turbine oil, etc., will not satisfy the product's specifications.

5. Never reapply lubricant.

Never reapply lubricant, as this may cause a degradation of particulate generation or operation characteristics.

6. Use the cylinder in inert gas environments.

Corrosive gases may cause corrosion of a cylinder and loss of durability.

7. Be sure to use the cylinder in pressure environments from atmosphere to 1.3×10^{-4} Pa (ABS).

If used in pressure environments below these conditions, grease applied to the guide unit will evaporate excessively and may cause environmental contamination and loss of durability.

8. Be sure to set the baking temperature to 100°C or less.

If a higher temperature is used, the grease will evaporate excessively and may cause environmental contamination and loss of durability.

9. Positioning of a cylinder should be performed using an optical sensor from outside the chamber.

A positioning sensor cannot be mounted on the cylinder.

Fitting

⚠ Caution

1. A fitting with an O-ring is used for a high vacuum

rodless cylinder.

Use a fitting that conforms to the dimensions below, and install it so that there is no air leakage.

Model	P (Port size)
CYV15	5/16-24 UNF
CYV32	7/16-20 UNF

2. Air blow and clean fittings and piping materials completely with clean air to remove oil and impurities, etc., before piping.

Series CYV Specific Product Precautions 2

Be sure to read before handling.

Speed Adjustment

⚠ Caution

1. A speed controller for clean room use is recommended for speed adjustment.
2. Install the speed controller outside the chamber.
3. In case of vertical mounting, a system with a regulated supply circuit installed on the down side is recommended. (This is effective against delays at the start of upward movement and for conservation of air.)

Cushion Effect (Sine Cushion) and Stroke Adjustment

⚠ Caution

1. A sine cushion (smooth start-up, soft stop) function is included in the standard specifications.

Due to the nature of a sine cushion, adjustment of the cushion effect is not possible. There is no cushion needle adjustment as in the case of conventional cushion mechanisms.

2. The stroke adjustment is a mechanism to adapt the slide table's stroke end position to a mechanical stopper on other equipment, etc.

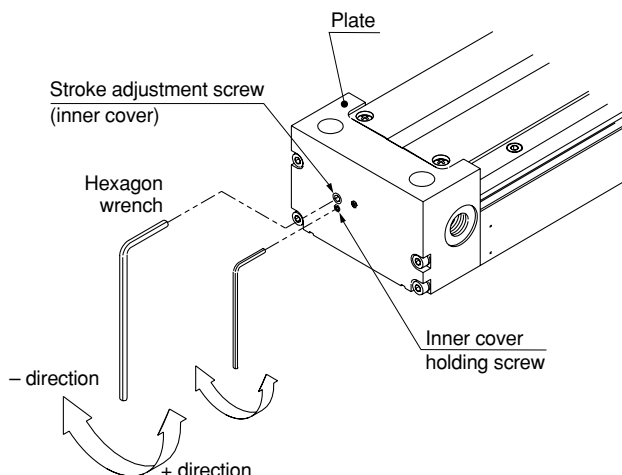

(Adjustment range: Total of both sides -4 to 0mm)

To ensure safety, perform adjustment after shutting off the drive air, releasing the residual pressure and implementing drop prevention measures, etc.

- 1) Loosen the inner cover holding screw with a hexagon wrench, etc.
- 2) To match the position with a mechanical stopper on other equipment, etc., rotate the stroke adjustment screw (inner cover) to the left or right with a hexagon wrench to move the inner cover back and forth.
- 3) The maximum adjustment on one side is -2 to 0mm. A total adjustment of approximately -4 to 0mm is possible using both sides.
- 4) After completing the stroke adjustment, tighten the inner cover holding screw with a hexagon wrench, etc.

Inner cover holding screw tightening torques [N·m]

Model	Screw size	Tightening torque
CYV15	M3 x 0.5	0.3
CYV32	M6 x 1	2.45

Maintenance

⚠ Caution

1. Never disassemble the cylinder tube or linear guide, etc.
If disassembled, the slide table may touch the outside surface of the cylinder tube resulting in a degradation of particulate generation characteristics.
2. Consult SMC when replacing seals and bearings (wear rings).
3. For repair of a cylinder inadvertently exposed to a corrosive gas, consult SMC after clarifying the name of the corrosive gas.

Particulate Generation Characteristics

⚠ Caution

1. In order to maintain the particulate generation grade, use operation of 1 million cycles or travel distance of about 200km as a guide. (Table 1 below)

If operation is continued beyond the recommended values, lubrication failure of the linear guide and a degradation of particulate generation characteristics may occur.

Table 1

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)¹⁾, and other safety regulations.

-  **Danger:** **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.
-  **Warning:** **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.
-  **Caution:** **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

- 1) ISO 4414: Pneumatic fluid power – General rules and safety requirements for systems and their components.
ISO 4413: Hydraulic fluid power – General rules and safety requirements for systems and their components.
IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)
ISO 10218-1: Robots and robotic devices - Safety requirements for industrial robots - Part 1: Robots.
etc.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. SMC products cannot be used beyond their specifications. They are not developed, designed, and manufactured to be used under the following conditions or environments.

- Use under such conditions or environments is not allowed.**
1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
 2. Use for nuclear power, railways, aviation, space equipment, ships, vehicles, military application, equipment affecting human life, body, and property, combustion equipment, entertainment equipment, emergency shut-off circuits, press clutches, brake circuits, safety equipment, etc., and use for applications that do not conform to standard specifications such as catalogues and operation manuals.
 3. Use for interlock circuits, except for use with double interlock such as installing a mechanical protection function in case of failure. Please periodically inspect the product to confirm that the product is operating properly.

Caution

SMC develops, designs, and manufactures products to be used for automatic control equipment, and provides them for peaceful use in manufacturing industries. Use in non-manufacturing industries is not allowed.

Products SMC manufactures and sells cannot be used for the purpose of transactions or certification specified in the Measurement Act of each country.

The new Measurement Act prohibits use of any unit other than SI units in Japan.

Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”. Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.²⁾ Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.

2) Suction cups (Vacuum pads) are excluded from this 1 year warranty.

A suction cup (vacuum pad) is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the suction cup (vacuum pad) or failure due to the deterioration of rubber material are not allowed by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Safety Instructions

Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.
