Positioning Driver
For AC Servomotor

Number of steps: 117
Compliant motor capacity: 50 W, 100 W, 200 W
Power supply voltage: 100/115 VAC 200/230 VAC
Command I/O: NPN, PNP

Compliant with Series LJ1, LG1 and LTF.
Master Slave

Features 1

- PC provided by customer.

Setting Software

Input positioning data from controller setting software.

- Each data is set collectively from master.
  Setting data dedicated for each slave is at one time from setting software after connecting the communications cable with master.

- The acceleration and the deceleration can be set individually.

Stepping Operation

Using I/O of a PLC, able to set the 117 patterns (steps) positioning.
For AC Servomotor Series LC8

Electric Actuator

Caution
In case of using 3-axis or more, be sure to contact us for operating usage and its condition.

Standardized X-Y bracket
Two types are available depending on Y-axis installation direction.

Features 2
Factors supplied for simplified cell assembly

Presents the system totally optimum for the small-sized cell production method.

1. Positioning conducts the horizontal (X-Y) positioning.

2. Lifting workpieces up and down, revolving and gripping those are done by actuator in each type (Cylinder, Gripper, Rotary Actuator) or vacuum adsorption.

3. Securing the position of workpieces and clamping those is done by pneumatic cylinder or electric actuator.

Controlling everything with the conventional multi-axis robot controller was complicated. However, simplified cell assembly system makes it possible to design, control and administrate by every group and lead to shorten the start-up period of equipment and simplify. We, SMC have numerous solutions to cover these each factor. Also, customer can select both the pneumatics and the electrics freely, so customer can build the cell production system at the lowered cost.
Hardware/Control devices that can be controlled by the ON/OFF function of a PLC.

Application Example Using LC8

**Pick & Place**

For multi-point positioning, it can be operated in accordance with the commands from a PLC, etc. by simply programming the operation data into the LC8.

**Palletizing motion**

By combining to form 2-axis, a motion such as palletizing is possible. If programming the positioning motion into LC8, it will operate in accordance with the command by PLC, etc. (Makeup motion cannot be done)
LC8 Controller Setting Software

Principal Functions

- **Operation data**
  Data used during the step operation.

- **Actuator data**
  Data for strokes, etc., which is in accordance with the actuator type.

- **Pallet data**
  Data entered for palletizing.

- **PIP data**
  Used for manually tuning the actuator gain.

- **Step test**
  Used to conduct a test run with the data programmed.

- **Cycle test**
  Used to conduct 2 operations alternately with the data programmed.

### Operation data programming screen

- **No.**
- **Description**
  - Inputting data
  - Returning to home position
  - Transmitting/Receiving the data
  - Exit
  - Emergency stop
  - Axis programming
  - Monitor mode
  - Reading file/Save
  - Selecting step number

- **Function**
  - Program the transfer mode, position, speed, acceleration, deceleration, torque (in torque mode).
  - Conduct motion to return to home position from software.
  - Transmit/Receive the data to and from LC8.
  - Close the program.
  - Emergency stop function, as well as displaying the status of emergency stop.
  - Select the axis number.
  - Switch to the monitor mode.
  - Write/Read the data in/out of the file.
  - Display the step number for operation data.

### Pallet data programming screen

- **No.**
- **Description**
  - Programming the X-axis
  - Programming the Y-axis
  - Step number
  - Jog

- **Function**
  - Program the data for the actuator in the X-axis.
  - Program the data for the actuator in the Y-axis.
  - Switches the display between 5 different pallet data.
  - Program the position by jog operation.
Series LC8

Programming the Stepping Data and Executing It (For details, please refer to the “Instruction Manual”)

How to Input the Stepping Data

Able to input the stepping data by using controller setting software.

1. Select the stepping number.
2. Select between the absolute position and relative position.
3. Input the position to travel.
4. Input the traveling velocity.
5. Input the acceleration/deceleration speed when traveling.
6. Write to the LC8 after inputting is completed.

How to Operate the Stepping Data

Operate the stepping data input communicated with the signal of a PLC.

Example) In case of operating the motion of step 1.

Step 1, Input the IN signal.
Input the START signal.
Motion starts.
BUSY signal will turn ON while operating.
If the motion is completed, BUSY signal will turn OFF.

Timing Chart
2-Axis Step Operation

Example: In case of operating the motion of step 2.

1. Motion for returning to home position starts 2-axis simultaneously. When returning to home position, please design the equipment so that the components inside the equipment should not interfere with each other.

2. In the case of entering step data for “Motion for 1-axis only”, enter step data by means of setting the “Relative coordinates to the 0 mm position” for the step data of the stopped axis.

Caution

1. Motion for returning to home position starts 2-axis simultaneously. When returning to home position, please design the equipment so that the components inside the equipment should not interfere with each other.

2. In the case of entering step data for “Motion for 1-axis only” enter step data by means of setting the “Relative coordinates to the 0 mm position” for the step data of the stopped axis.
How to Input the Pallet Data

How to Input the Pallet Data

Able to input the pallet data by attached programming software for controller.

1. Program the axis number to be used.
2. Input the off-set distance of the home position.
3. Input the distance (pitch) of the pallet.
4. Input the traveling velocity.
5. Input the acceleration and deceleration when traveling.
6. Input the number of line and row for X-axis and Y-axis.
7. Write to the LC8 after input is completed.

If the START signal is inputted after the step number of the palletizing data has been inputted, it will move to the 1st row/1st column of the pallet.

On every input of the START signal by using the same step number it will move to the 2nd row/1st column, 3rd row/1st column...1st row/2nd column on the pallet. Each respective move is completed when BUSY signal is turned OFF.
Positioning Driver/For AC Servomotor

Series LC8

Compliant actuators/Series LJ1, Series LG1, Series LTF

How to Order

<table>
<thead>
<tr>
<th>Master LC8 B 1 H 1 N M F</th>
</tr>
</thead>
<tbody>
<tr>
<td>Motor capacity</td>
</tr>
<tr>
<td>1: 50 W</td>
</tr>
<tr>
<td>2: 100 W</td>
</tr>
<tr>
<td>3: 200 W</td>
</tr>
<tr>
<td>Power voltage</td>
</tr>
<tr>
<td>1: 100 VAC/115 VAC</td>
</tr>
<tr>
<td>2: 200 VAC/230 VAC</td>
</tr>
</tbody>
</table>

Accessory

1. LC8-1-MP: Motor/Power connector
2. LC8-1-B: Kit for mounting bracket (Designated only with mounting bracket)
3. LC8-1-W1: LC8 controller installation software

Option

1. LC8-1-CN: Command I/O connector
2. LC8-1-1050: Connector with command I/O cable (0.5 m)
3. LC8-1-1050P: With connector stick terminals with command I/O cable (0.5 m)
4. LC8-1-R03C: RS-232C communications cable (3 m)

Precautions on Using Master

Caution

1. In case of using in 1 axis, use a master (Slave alone cannot be used.)
2. Regarding the use of 3 axis or more, be sure to contact us for flow to use and operating conditions.
1. Motion for returning to the home position starts simultaneously for master and slave. Design the equipment so that it will not interfere with components in equipment when returning to the home position.

2. If the START signal is input, the designated operation data for all the axes will start to the designated step number. For the operation data of the axis which should not operate, enter “Relative coordinates to the 0 mm position”.

3. In case of using with single axis, use a master. (Slave alone cannot be used)

4. Regarding the use of 3-axis or more, be sure to contact us for how-to-use and operating conditions.

Series LC8

Mounting Method

LC8-B□□□□□□□F (In the case of a bracket option)

Perform by mounting the attached bracket. For mounting dimensions please refer to the external dimension on the prior page. For wall mounting, please prepare the required M5 screws (4 pcs.).

Accessory Contents

<table>
<thead>
<tr>
<th></th>
<th>Mounting bracket</th>
<th>2 pcs.</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Mounting screw</td>
<td>4 pcs.</td>
</tr>
</tbody>
</table>

LC8-B□□□□□□□ (In case that there is not bracket option)

Please prepare M5 screws (4 pcs.). Select a screw length that does not exceed the thickness of the plate + 5 mm. Drill holes in the plate with a distance of 35 mm between the width of the holes and 109.8 mm between the height of the hole.

Note) Do not use screws with a longer length than designated. If longer, it is likely to cause an electrical shock or a fire.

Precautions on Using Multi-axis Cable

⚠️ Caution

In case of connecting the LC8 with multi-axis cable, the cable should be 20 mm or longer but less than 30 mm to the driver.

| | | 500 | ±0.05 | Rolled ball screw | Frame type linear guide | 500 |

**Note:** 1) The actuator’s external dimensions and its specifications are equivalent to its corresponding part number’s. Please confirm each actuator by referring to its corresponding catalog.

### How to Order

**Series LJ1**

- **Guide type:**
  - H: High rigidity direct acting guide
  - S: Slider guide

- **Series:**
  - 10: 10 series
  - 20: 20 series
  - 30: 30 series

- **Motor specifications:**
  - N: Standard motor for LC1
  - 8: Standard motor for LC8

- **Motor capacity:**
  - 1: 50 W
  - 2: 100 W
  - 3: 200 W

- **Feed screw type:**
  - P: Ground ball screw
  - N: Rolled ball screw
  - S: Slide screw

- **Power voltage:**
  - 1: 100/115 VAC (50/60 Hz)
  - 2: 200/230 VAC (50/60 Hz)

**Series LG1**

- **Guide type:**
  - H: High rigidity direct acting guide
  - S: Slider guide

- **Series:**
  - 10: 10 series
  - 20: 20 series
  - 30: 30 series

- **Motor specifications:**
  - N: Standard motor for LC1
  - 8: Standard motor for LC8

- **Motor capacity:**
  - 1: 50 W
  - 2: 100 W
  - 3: 200 W

- **Feed screw type:**
  - P: Ground ball screw
  - N: Rolled ball screw
  - S: Slide screw

- **Power voltage:**
  - 1: 100/115 VAC (50/60 Hz)
  - 2: 200/230 VAC (50/60 Hz)

### Series LTF

#### Configuration
- **Motor capacity**: Nil (Standard motor for LC1), 8 (Standard motor for LC8)
- **Motor output**: E 100 W, F 200 W
- **Feed screw type**: P Ground ball screw, N Rolled ball screw
- **Power voltage**: 1 100/115 VAC (50/60 Hz), 2 200/230 VAC (50/60 Hz)
- **Cable length**: 2 2 m, 3 3 m, 4 4 m, 5 5 m
- **Motor cable switch entry direction**: R Right, L Left
### X-Y Bracket

Bracket for combining X-axis actuator and Y-axis actuator

*Direction for Y-axis installation (Refer to “Table 1”)*

- **LS**: Extended direction: Left
- **RS**: Extended direction: Right

Note: Extended direction viewed from X-axis motor side.

When selecting X-Y bracket, please contact SMC.
Electric Actuator/Controller/Driver
Safety Instructions

These safety instructions are intended to prevent a hazardous situation and/or equipment damage. These instructions indicate the level of potential hazard by a label of "Caution", "Warning" or "Danger". To ensure safety, be sure to observe ISO 10218 Note 1), JIS 8433 Note 2) and other safety practices.

⚠️ Caution: Operator error could result in injury or equipment damage.
⚠️ Warning: Operator error could result in serious injury or loss of life.
⚠️ Danger: In extreme conditions, there is a possible result of serious injury or loss of life.

Note 1) ISO 10218: Manipulating industrial robots - Safety
Note 2) JIS 8433: General Rules for Robot Safety

⚠️ Warning

1. The compatibility of electric actuators is the responsibility of the person who designs the system or decides its specifications.
   Since the products specified here are used in various operating conditions, their compatibility for the specific system must be based on specifications or after analysis and/or tests to meet your specific requirements. The expected performance and safety assurance will be the responsibility of the person who has determined the compatibility of the system. This person should continuously review the suitability of all items specified, referring to the latest catalog information with a view to giving due consideration to any possibility of equipment failure when configuring a system.

2. Only trained personnel should operate this equipment.
   Electric actuators can be dangerous if an operator is unfamiliar with them. Assembly, handling or repair of systems using electric actuators should be performed by trained and experienced operators.

3. Do not service machinery/equipment or attempt to remove components until safety is confirmed.
   1. Inspection and maintenance of machinery/equipment should only be performed after confirmation of safe locked-out control positions.
   2. When equipment is to be removed, confirm the safety process as mentioned above, and shut off the power supply for this equipment.
   3. Before machinery/equipment is restarted, confirm that safety measures are in effect.

4. Contact SMC if the product is to be used in any of the following conditions:
   1. Conditions and environments beyond the given specifications, or if product is used outdoors.
   2. Installation on equipment in conjunction with atomic energy, medical equipment, food and beverages, or safety equipment.
   3. An application which has the possibility of having negative effects on people, property or animals, requiring special safety analysis.

5. Prior to use, thoroughly read the “Instruction Manual” and use the product appropriately after first confirming the product’s operation with the distributor or SMC.

6. Before using, carefully read the handling cautions described in this catalog.

7. Some products listed in this catalog have limitations to the operating usage and locations. Please confirm the limitations with the distributor or SMC.
1. In cases where dangerous conditions may result from power failure or malfunction of the product, install safety equipment to prevent damage to machinery and human injury. Consideration must also be given to drop prevention with regard to suspension equipment and lifting mechanisms.

2. Consider possible loss of power sources. Take measures to protect against human injury and machine damage in the event that there is a loss of air pressure, electricity or hydraulic power.

3. Consider emergency stops. Design so that human injury and/or damage to machinery and equipment will not be caused when machinery is stopped by a safety device under abnormal conditions such as a power outage or a manual emergency stop.

4. Consider the action when operation is restarted after an emergency stop or abnormal stop. Design the machinery so that human injury or equipment damage will not occur upon restart of operation.

---

**Caution on Design**

**Warning**

1. In cases where dangerous conditions may result from power failure or malfunction of the product, install safety equipment to prevent damage to machinery and human injury. Consideration must also be given to drop prevention with regard to suspension equipment and lifting mechanisms.

2. Consider possible loss of power sources. Take measures to protect against human injury and machine damage in the event that there is a loss of air pressure, electricity or hydraulic power.

3. Consider emergency stops. Design so that human injury and/or damage to machinery and equipment will not be caused when machinery is stopped by a safety device under abnormal conditions such as a power outage or a manual emergency stop.

4. Consider the action when operation is restarted after an emergency stop or abnormal stop. Design the machinery so that human injury or equipment damage will not occur upon restart of operation.

---

**Caution on Handling**

**Warning**

1. In order to ensure proper operation, be certain to read the instruction manual carefully. As a rule, handling or usage/operation other than those contained in the instruction manual are prohibited.

2. If the actuator will be used in an environment where it will be exposed to chips, dust, cutting oil (water, liquids), etc., a cover or other protection should be provided.

3. Operate with cables secured. Avoid bending cables at sharp angles where they enter the actuator, and also be sure that cables do not move easily.

---

**Caution on Design**

**Warning**

1. Confirm the specifications. The products in this catalog should not be used outside of the range of specifications, since this may cause damage malfunction, etc. (Refer to specifications.)

2. In case of using in 3-axis or more, please contact us for how-to-use and operating conditions prior to selection.
Electric Actuator/Precautions 2
Be sure to read before handling.

Actuator

Caution on Design

⚠️ Warning
1. There is a possibility of dangerous sudden action by actuators if sliding parts of machinery are twisted due to external forces, etc.
   In such cases, human injury may occur, e.g., by catching hands or feet in the machinery, or damage to the machinery itself may occur.
   Therefore, the machine should be adjusted for smooth operation and designed to avoid such dangers.
2. A protective cover is recommended to minimize the risk of human injury.
   If a driven object and moving parts of an actuator pose a danger of human injury, design the structure to avoid contact with the human body.
3. Securely tighten all stationary parts and connected parts of electric actuators so that they will not become loose.
   Avoid use in locations where direct vibration or impact shock, etc., will be applied to the body of the actuator.

⚠️ Caution

Operation

9. In case several persons are doing the job, determine the procedure, signs, measures against abnormality and restarting measures in advance. Then let the person who isn’t doing the job supervise that job.

Caution on Handling

⚠️ Caution
1. The actuator can be used with a load directly applied to it, as long as it is within the allowable range. However, it is necessary to design an appropriate connecting method and use careful alignment when a load with external support and guide mechanisms is connected. Please note that the reference plane for the actuator body mount should only be used as a guideline to install the body. Never use it as a reference plane to align the entire equipment with external support and guide mechanisms. The longer the stroke is, the larger the variation in the axial center becomes. Therefore, devise a connection method to absorb the variation.
2. Since the bearing parts and parts surrounding the lead screw are adjusted at the time of shipment, do not change the setting of the adjusted parts.
3. The product can be used without lubrication. In case the product is lubricated, special grease is required. Please contact the distributor or SMC.
4. If the electric actuator is repeatedly operated with the short stroke cycles (20 mm for LJ, 10 mm for LX), loss of grease may occur. Therefore, operate the actuator with a full stroke once every scores of cycles.

Caution

1. Do not use until you verify that the equipment can operate properly.
2. The product should be mounted and operated after thoroughly reading the instruction manual and understanding its contents.
3. Do not dent, scratch or cause other damage to the body and table mounting surfaces.
   This may cause a loss of parallelism in the mounting surfaces, looseness in the guide unit, an increase in operating resistance or other problems.
4. When attaching a workpiece, do not apply strong impact shock or a large moment.
   If an outside force exceeding the allowable moment is applied, this may cause looseness in the guide unit, an increase in sliding resistance or other problems.
5. When connecting a load having an external support or guide mechanism, be sure to select a suitable connection method and perform careful alignment.

Operation

1. Conduct the following inspection before actuator/controller is operated.
   a) Confirm that the power supply line or each signal line for actuator/controller is not broken.
   b) Confirm that the power supply line or each signal line for actuator/controller is not loosened.
   c) Confirm that the actuator/controller is not mounted loosely.
   d) Confirm that the actuator/controller is operated correctly.
   e) Confirm the function of the emergency stop.
2. Take measures such as installing a fence, etc., to prevent any person from entering the operational area of the actuator/controller and related equipment.
3. If a person should enter an area as previously mentioned 2), take measures to ensure that the emergency stop is controlled by a sensor, etc.
4. In case the actuator/controller is stopped by abnormalities, take necessary measures to prevent danger from related equipment.
5. In case of abnormalities of related equipment, take the necessary measures to prevent danger from an actuator/controller.
6. Take necessary measures to prevent broken or cut power lines or signal lines by pinching, shearing, curling, scratching and grazing.
7. In case there is abnormal heat, fume and flame, etc., cut off the power supply immediately.
8. In the event of an installation, adjustment, inspection or maintenance of an actuator/controller, as well as related equipment, be sure to cut off the power supply and take measures such as locking or safety-lock, etc., so that persons other than workers are not able to restart the operation again. Furthermore, display the information for doing those jobs at the places where anyone can see easily.

Mounting

Operation

1. The actuator can be used with a load directly applied to it, as long as it is within the allowable range. However, it is necessary to design an appropriate connecting method and use careful alignment when a load with external support and guide mechanisms is connected. Please note that the reference plane for the actuator body mount should only be used as a guideline to install the body. Never use it as a reference plane to align the entire equipment with external support and guide mechanisms. The longer the stroke is, the larger the variation in the axial center becomes. Therefore, devise a connection method to absorb the variation.
2. Since the bearing parts and parts surrounding the lead screw are adjusted at the time of shipment, do not change the setting of the adjusted parts.
3. The product can be used without lubrication. In case the product is lubricated, special grease is required. Please contact the distributor or SMC.
4. If the electric actuator is repeatedly operated with the short stroke cycles (20 mm for LJ, 10 mm for LX), loss of grease may occur. Therefore, operate the actuator with a full stroke once every scores of cycles.

Caution

1. Do not use until you verify that the equipment can operate properly.
2. The product should be mounted and operated after thoroughly reading the instruction manual and understanding its contents.
3. Do not dent, scratch or cause other damage to the body and table mounting surfaces.
   This may cause a loss of parallelism in the mounting surfaces, looseness in the guide unit, an increase in operating resistance or other problems.
4. When attaching a workpiece, do not apply strong impact shock or a large moment.
   If an outside force exceeding the allowable moment is applied, this may cause looseness in the guide unit, an increase in sliding resistance or other problems.
5. When connecting a load having an external support or guide mechanism, be sure to select a suitable connection method and perform careful alignment.

Operation

1. Conduct the following inspection before actuator/controller is operated.
   a) Confirm that the power supply line or each signal line for actuator/controller is not broken.
   b) Confirm that the power supply line or each signal line for actuator/controller is not loosened.
   c) Confirm that the actuator/controller is not mounted loosely.
   d) Confirm that the actuator/controller is operated correctly.
   e) Confirm the function of the emergency stop.
2. Take measures such as installing a fence, etc., to prevent any person from entering the operational area of the actuator/controller and related equipment.
3. If a person should enter an area as previously mentioned 2), take measures to ensure that the emergency stop is controlled by a sensor, etc.
4. In case the actuator/controller is stopped by abnormalities, take necessary measures to prevent danger from related equipment.
5. In case of abnormalities of related equipment, take the necessary measures to prevent danger from an actuator/controller.
6. Take necessary measures to prevent broken or cut power lines or signal lines by pinching, shearing, curling, scratching and grazing.
7. In case there is abnormal heat, fume and flame, etc., cut off the power supply immediately.
8. In the event of an installation, adjustment, inspection or maintenance of an actuator/controller, as well as related equipment, be sure to cut off the power supply and take measures such as locking or safety-lock, etc., so that persons other than workers are not able to restart the operation again. Furthermore, display the information for doing those jobs at the places where anyone can see easily.
Electric Actuator/Precautions 3
Be sure to read before handling.

**Controller/Driver/Positioning Driver/Regenerative Absorption Unit**

### Caution on Handling

⚠ **Warning**
1. Never touch the controller or driver inside. It will likely lead to an electrical shock or other trouble.
2. Use only the designated combination between motor and controller driver.

⚠ **Caution**
1. Do not disassemble and modify. It may result in the trouble, malfunction, fire, etc.
2. Do not touch for a while when being energized or after cut off the power source because it is high temperature.
3. If a fire or danger against the human being is expected by abnormal heat generation of the product, emitting fume and catching on fire, etc., cut off the power supply for the main body and the system immediately.

### Power Supply

⚠ **Caution**
1. In cases where voltage fluctuations greatly exceed the required voltage, a constant voltage transformer, etc., should be used to allow operation within the required range.
2. Use a power supply that has low noise between lines and between power and ground. In cases where noise is high, an isolation transformer should be used.
3. The power supply line to the controller and the interface power supply line to general input/output and control terminals (24 VDC) must be wired separately in different systems.
4. The wire must not be bundled with or arranged in close proximity to the input/output lines of control terminals or encoder signal lines.
5. To prevent surges from lightning, connect a varistor for lightning. Ground the surge absorber for lightning separately from the grounding of the controller.

### Grounding

⚠ **Caution**
1. Be sure to carry out grounding in order to ensure the noise tolerance of the controller.
2. Dedicated grounding should be used as much as possible. Grounding should be to a type 3 ground. (Ground resistance of 100 Ω or less.)
3. Use a wire with a sectional area of 2 mm² or larger for grounding. Grounding should be as close as possible to the controller, and the ground wires should be as short as possible.
4. In the unlikely event that malfunction is caused by the ground, it may be disconnected.

### Mounting

⚠ **Caution**
1. Mount the controller driver on incombustible materials. Mounting on combustible materials directly or mounting closely to it may lead to a fire.
2. Consider the cooling period, so that the operating temperature of main body should be within the range of specifications. Also, allow enough distance from each side of the main body, construction and the parts.
3. Avoid placing with large-sized solenoid contact apparatus or vibrating source such as no fuse insulator and then make a separate panel or mount in the distance.
4. The construction of this product enables the connectors to be inserted or removed after installation.
5. If there are concave or convex or distorted parts on the mounting face, an unreasonable force can be applied to the frame or case, which can cause trouble. Mount on the flat face.

### Wiring

⚠ **Danger**
1. Adjustment, installation, or wiring changes should be conducted after power supply to this product is turned off. Otherwise, there is a possibility of an electrical shock.

⚠ **Caution**
1. Wiring should be done correctly. For each terminal, voltages other than stipulated in the operation manual should not be applied. Otherwise, the product may break.
2. Connect the connector securely.
3. Treat the noise securely. If the noise is at the same wavelength as the signal lines, it will lead to malfunction. As a countermeasure, separate the high and low electrical lines and shorten the length of wiring, etc.
4. In the event of connecting the electric actuator’s motor power line and encoder signal line, use adequate care in identifying the lines and the connector’s direction.
5. Never disassemble the motor power lines for the electric actuator and the encoder signal lines. Also, in the event of using a cable prepared by customer (user), use it only after confirming the cable size can provide enough electricity as stipulated in the instruction manual and that there is no noise effect.

6. The motor power lines for the electric actuators and the encoder signal lines, 100 VAC lines, as well as other high voltage lines, should not be bundled together. They should be placed as far away as possible.

7. Terminals for controlling, for general-purpose input/output, motor power lines and encoder signal lines should never be inserted or pulled out while the main power supply for the controller is ON.
