The production of the VDW10/20/30 series was discontinued. (Except for VDW10/20 manifold and 3 port type)
For details about new series: VDW10/20 → page 453
VDW30 → VX2 series

Molded coil specifications have been added!

Grommet/Molded  Flat terminal/Molded
For Water and Air Compact Direct Operated 2/3 Port Solenoid Valve

VDW Series

Improved durability (Nearly twice the life of the previous series)

The use of a unique magnetic material reduces the operating resistance of moving parts, while improving service life, wear and corrosion resistance.

**Improved corrosion resistance**
Special material introduced

High flow rate: Cv factor 0.04 to 0.46 (2 port)

Universal porting VDW200/300 (3 port)

Improved environment resistance
Environment resistance is improved by using a molded coil. (Enclosure IP65 or equivalent, grommet mold)

Ease of maintenance has been improved.
Changing of the coil is made easy by means of clip design. (2 port)

Threaded assembly
Simplifies maintenance.

Brass (C37)/Stainless steel manifolds added to series (2 port)

Threaded for bottom mounting
Special bracket can be mounted.

Grommet/Molded

VDW30 → VX2 series

The production was discontinued.
Standard Specifications

Valve construction

<table>
<thead>
<tr>
<th>Fluid (Note 2)</th>
<th>Direct operated poppet</th>
</tr>
</thead>
</table>

Withstand pressure (MPa) | 2.0

Ambient temperature (°C) | −10 to 50

Fluid temperature (°C) | 1 to 50 (No freezing)

Environment | Location without corrosive or explosive gases

Valve leakage (cm³/min) | 0 (with water pressure) 1 or less (Air)

Mounting orientation | Unrestricted

Vibration/Impact (m/s²) (Note 4) | 30/150

Rated voltage | 24 VDC, 12 VDC, 6 VDC, 5 VDC, 3 VDC, 100 VAC, 110 VAC, 200 VAC, 220 VAC, 220 VAC (50/60 Hz)

Allowable voltage fluctuation (%) | ±10% of rated voltage

Coil insulation type | Class B

Enclosure

<table>
<thead>
<tr>
<th>Grommet / Tape winding</th>
<th>Dust-proof (equivalent to IP40)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flat terminal / Molded</td>
<td>Dust-tight (equivalent to IP60) (Note 5)</td>
</tr>
<tr>
<td>Grommet / Molded</td>
<td>Dust-tight / Low jetproof (equivalent to IP65)</td>
</tr>
</tbody>
</table>

Power consumption (W) (Note 3) | 2.5 (VDW10), 3 (VDW20/30)

Note 1) When used under conditions which may cause condensation on the exterior of the product, select Grommet / Molded.

Note 2) When used with deionized water, select “L” (Stainless steel, FKM) for the material type.

Note 3) Since the AC coil specification includes a rectifier element, there is no difference in power consumption between inrush and holding.

In the case of 110/220 VAC, the VDW10 is 3 W and the VDW20/30 is 3.5 W.

Note 4) Vibration resistance —— No malfunction when tested with one sweep of 5 to 200 Hz in the axial direction and at a right angle to the armature, in both energized and deenergized states.

Impact resistance —— No malfunction when tested with a drop tester in the axial direction and at a right angle to the armature, one time each in energized and deenergized states.

Note 5) Since electrical connections are exposed, there is no water resistance.

Characteristic Specifications

Model | Port size | Orifice dia. (mm ø) | Max. operating pressure differential (MPa) (Note 1) | Operating Pressure range (MPa) (Note 2) | Weight (kg) |

</tbody>
</table>

Note 1) The maximum operating pressure differential changes depending on the flow direction of the fluid. Refer to page 494 for details.

Note 2) For low vacuum specifications, the operating pressure range is 1 Torr (1.33 x 10² Pa) to 1.0 MPa. Please consult with SMC if using below 1 Torr (1.33 x 10² Pa).

* Figure shows VV2DW2.

**Manifold additions**

1. Install a passage pipe assembly in between the manifold bases to be added.

2. Connect the respective manifold bases with a connecting plate assembly. (Tightening torque: 0.9 ± 0.1 N·m)

3. Attach brackets to the manifold bases. (when equipped with brackets) (Tightening torque: 0.9 ± 0.1 N·m)

*Note* Manifold can be increased by every 2 or 3-station unit.

Order one set each of manifold base, connection plate assembly and passage pipe assembly.

### Standard Specifications

#### Valve Specifications
- **Valve construction**: Direct operated poppet
- **Fluid** *(Note 2)*: Water (except waste water or agricultural water), Air, Low vacuum
- **Withstand pressure (MPa)**: 2.0
- **Ambient temperature (°C)**: –10 to 50
- **Fluid temperature (°C)**: 1 to 50 (No freezing)
- **Environment**: Location without corrosive or explosive gases
- **Valve leakage (cm³/min)**: 0 (with water pressure) 1 (Air)
- **Mounting orientation**: Unrestricted
- **Vibration/Impact (m/s²)*** *(Note 4)*: 30/150

#### Valve Coefficient Specifications
- **Rated voltage**: 24 VDC, 12 VDC, 100 VAC, 110 VAC, 200 VAC, 220 VAC (50/60 Hz)
- **Allowable voltage fluctuation (%)**: ±10% of rated voltage
- **Coil insulation type***(Note 5)*: Class B
- **Enclosure*** *(Note 6)*: Dust-proof (equivalent to IP40)
- **Power consumption (W)***(Note 3)*: 3

*(Note 1) Please consult with SMC when used under conditions which may cause condensation on the exterior of the product.
(Note 2) When used with deionized water, select “L” (Stainless steel, FKM) for the material type.
(Note 3) Since the AC coil specification includes a rectifier element, there is no difference in power consumption between inrush and holding.
(Note 4) Vibration resistance ····· No malfunction when tested with one sweep of 5 to 200 Hz in the axial direction and at a right angle to the armature, in both energized and deenergized states.
Impact resistance ········ No malfunction when tested with a drop tester in the axial direction and at a right angle to the armature, one time each in energized and deenergized states.
(Note 5) Since electrical connections are exposed, there is no water resistance.
(Note 6) For enclosure, refer to “Glossary of Terms” on page 495. When using the product in a place which requires water resistance, please contact SMC.

### Characteristic Specifications

Please note: The production of the VDW10/20/30 series was discontinued. (Except for VDW10/20 manifold and 3 port type) For details about new series: VDW10/20 → page 453 VDW30 → VX2 series
### Pressure Terminology

1. **Maximum operating pressure differential**
   This indicates the maximum pressure differential (inlet and outlet pressure differential) which can be allowed for operation with the valve closed or open. When the outlet pressure is 0 MPa, this becomes the maximum operating pressure.

2. **Maximum operating pressure**
   This indicates the limit of pressure that can be applied inside the pipelines. (Line pressure)
   (The pressure differential of the solenoid valve unit must be no more than the maximum operating pressure differential.)

3. **Withstand pressure**
   The pressure which must be withstood without a drop in performance after returning to the operating pressure range (The value under the prescribed conditions).

### Electrical Terminology

1. **Surge voltage**
   A high voltage which is momentarily generated in the shut-off unit by shutting off the power.

2. **Enclosure**
   A degree of protection defined in the “JIS C 0920: Waterproof test of electric machinery/appliance and the degree of protection against the intrusion of solid foreign objects”.
   Verify the degree of protection for each product.

   ![IP Classification Diagram]

   **First Characteristics:**
   Degrees of protection against solid foreign objects

   - 0: Non-protected
   - 1: Protected against solid foreign objects of 50 mm ø and greater
   - 2: Protected against solid foreign objects of 12 mm ø and greater
   - 3: Protected against solid foreign objects of 2.5 mm ø and greater
   - 4: Protected against solid foreign objects of 1.0 mm ø and greater
   - 5: Dust-protected
   - 6: Dusttight

   **Second Characteristics:**
   Degrees of protection against water

   - 0: Non-protected
   - 1: Protected against vertically falling water drops
   - 2: Protected against vertically falling water drops when enclosure tilted up to 15°
   - 3: Protected against rainfall when enclosure tilted up to 60°
   - 4: Protected against splashing water
   - 5: Protected against water jets
   - 6: Protected against powerful water jets
   - 7: Protected against the effects of temporary immersion in water
   - 8: Protected against the effects of continuous immersion in water

   Example) IP65: Dusttight, Low jetproof type
   “Low jetproof type” means that no water intrudes inside an equipment that could hinder from operating normally by means of applying water for 3 minutes in the prescribed manner. Take appropriate protection measures, since a device is not usable in an environment where a droplet of water is splashed constantly.
**VDW Series**

*Specific Product Precautions 1*

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

---

### Warning

1. **Cannot be used as an emergency shutoff valve, etc.**
   The valves presented in this catalog are not designed for safety applications such as an emergency shutoff valve. If the valves are used in this type of system, other reliable safety assurance measures should also be adopted.

2. **Extended periods of continuous energization**
   Please consult with SMC when using with energization for long periods of time.

3. **Liquid rings**
   In cases with a flowing liquid, provide a by-pass valve in the system to prevent the liquid from entering the liquid seal circuit.

4. **This solenoid valve cannot be used for explosion proof applications.**

5. **Maintenance space**
   The installation should allow sufficient space for maintenance activities (removal of valve, etc.).

---

### Selection

#### Warning

1. **Confirm the specifications.**
   Give careful consideration to the operating conditions such as the application, fluid and environment, and use within the operating ranges specified in this catalog.

2. **Fluid temperature**
   Please use within the operating fluid temperature range.

3. **Fluid quality**
   - **In the case of water**
     The use of a fluid which contains foreign matter can cause problems such as malfunction and seal failure by promoting wear of the valve seat and armature, and by sticking to the sliding parts of the armature, etc. Install a suitable filter (strainer) immediately upstream from the valve. In general, a mesh of about 80 to 100 is a guideline for the filter.
   - **In the case of air**
     Use ordinary compressed air where a filter of 40 μm or less is provided on the inlet side piping. (Except dry air)

---

### Caution

1. **Leakage voltage**
   - **When the solenoid valve is operated using the controller, etc., the leakage voltage should be the product allowable leakage voltage or less.**
   - Particularly when using a resistor in parallel with a switching element and using a C-R element (surge voltage suppressor) to protect the switching element, take note that leakage current will flow through the resistor, C-R element, etc., creating a possible danger that the valve may not turn off.

2. **Low temperature operation**
   1) The valves can be used up to an ambient temperature of −10°C, however take measures to prevent solidification of impurities or freezing etc.
   2) When using valves for water application in cold climates, first stop the water supply/discharge of the pump etc., and then take measures to prevent freezing such as draining water in pipe. When heating by steam, be careful not to expose the coil portion to steam. Also, please take measures to prevent freezing such as heating the body.

---

### Mounting

1. **If air leakage increases or equipment does not operate properly, stop operation.**
   After mounting is completed, confirm that it has been done correctly by performing a suitable function test.

2. **Do not apply external force to the coil section.**
   When tightening is performed, apply a wrench or other tool to the outside of the piping connection parts.

3. **Do not warm the coil assembly with a heat insulator, etc.**
   Use tape, heaters, etc., for freeze prevention on the piping and body only. They can cause the coil to burn out.

4. **Secure with brackets, except in the case of steel piping and copper fittings.**

5. **Avoid sources of vibration, or adjust the arm from the body to the minimum length so that resonance will not occur.**

6. **Operation manual**
   The product should be mounted and operated after the Operation Manual is thoroughly read and its contents are understood. Keep the Operation Manual where it can be referred to as needed.

7. **Painting and coating**
   Warnings or specifications printed or labeled on the product should not be erased, removed or covered up.
**Caution**

1. **Preparation before piping**
   Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe.

2. **Winding of sealant tape**
   When connecting pipes, fittings, etc., be sure that chips from the pipe threads and sealing material do not enter the valve. Furthermore, when sealant tape is used, leave 1.5 to 2 thread ridges exposed at the end of the threads.

3. **Avoid connecting ground lines to piping, as this may cause electric corrosion of the system.**

4. **Always tighten threads with the proper tightening torque.**
   When attaching fittings to valves, tighten with the proper tightening torque shown below.

5. **Connection of piping to products**
   - When connecting piping to a product, refer to its operation manual to avoid mistakes regarding the supply port, etc.
   - Do not apply external force to the coil when holding it to connect piping, as the tube may deform.

### Electrical Connections

**Caution**

**Wiring**

1. **As a rule, use electrical wire with a cross sectional area of 0.5 to 1.25 mm² for wiring.**
   Furthermore, do not allow excessive force to be applied to the lines.

2. **Use electrical circuits which do not generate chattering in their contacts.**

3. **Use voltage which is within ±10% of the rated voltage.**
   In cases with a DC power supply where importance is placed on responsiveness, stay within ±5% of the rated value. The voltage drop is the value in the lead wire section connecting the coil.

For details about new series: VDW10/20 → page 453
VDW30 → VX2 series
```

492
Operating Environment

⚠️ Warning
1. Do not use the valves in an atmosphere having corrosive gases, chemicals, salt water, water, steam, or where there is direct contact with any of these.
2. Do not use in explosive atmospheres.
3. Do not use in locations subject to vibration or impact.
4. Do not use in locations where radiated heat will be received from nearby heat sources.
5. Employ suitable protective measures in locations where there is contact with water droplets, oil or welding spatter, etc.

⚠️ Maintenance
1. Perform maintenance according to the procedure in the operation manual. Incorrect handling will cause damage or malfunction to devices or equipment.
2. Removing the product
   1) Shut off the fluid supply and release the fluid pressure in the system.
   2) Shut off the power supply.
   3) Dismount the product.
3. Low frequency operation
   Switch valves at least once every 30 days to prevent malfunction. Also, in order to use it under the optimum state, conduct a regular inspection once a half year.

⚠️ Caution
1. Filters and strainers
   1) Be careful regarding clogging of filters and strainers.
   2) Replace filter elements after one year of use, or earlier if the pressure drop reaches 0.1 MPa.
   3) Clean strainers when the pressure drop reaches 0.1 MPa.
   4) Exhaust the drain from an air filter periodically.
2. Storage
   When not using for a long time (more than approx. one month) after use with water, thoroughly remove all moisture to prevent rust and deterioration of rubber materials, etc.

Replacing the Solenoid Coils

⚠️ Warning
1. Perform maintenance according to the procedure in the operation manual. Incorrect handling will cause damage or malfunction to devices or equipment.

⚠️ Caution
2 port valve

Press the clip in direction ① with a flat head screwdriver, etc., and remove it from the tube assembly groove.

Remove the cover in direction ②, and replace the solenoid coil.

After replacing the coil, insert the clip into the tube assembly groove from direction ③. After inserting it into the groove, confirm the position and condition of the clip.

The production of the VDW10/20/30 series was discontinued. (Except for VDW10/20 manifold and 3 port type) For details about new series: VDW10/20 → page 453 VDW30 → VX2 series
Replacing the Solenoid Coils

**Caution**

3 port valve

After removing the socket with a wrench, etc., lift off the plate, wave washer and cover, and replace the coil assembly. After replacing the coil, first tighten the socket by hand while holding down the plate and wave washer, and then tighten it further with a torque of 0.8 to 1 N·m.

- Precautions when attaching and removing the socket
- Be careful that the O-ring installed on the bottom (plate side) of the socket does not fall out or become chewed up, etc.
- Be sure to secure the body by wrench, etc., and tighten the socket within the tightening torque range given above. If the torque is applied excessively, there is a danger of damaging the threads.

Piping to 3 Port Valve N.O. Port

Caution

When piping to an N.O. port, be sure to perform piping work while securing the socket by using wrench or other tool. Refer to back page 491 for other precautions related to piping.

Fluid Flow Direction

Caution

The maximum operating pressure differential differs depending on the flow direction of the fluid. If the pressure differential at each port exceeds the values in the table below, valve leakage may occur.

<table>
