Aluminum bodied

- Uniform baking temperature
- Lightweight, Compact
- Minimal outgassing
- Minimal contamination from heavy metals
- High corrosion resistance to fluorine gas

Bellows are replaceable
(Bellows seal type)

The bellows assembly can be replaced, which reduces maintenance costs and waste materials.

New
A model with a solenoid valve has been added.

New
A heat-resistant 2-color indicator solid state auto switch has been added to the high-temperature type. (Made to order on page 18)
Uniform baking temperature

Excellent thermal conductivity results in a uniform temperature for the entire valve body and a marked decrease in the condensation of gases inside the valve.

Lightweight, Compact

Large conductance, small body, excellent resistance against fluorine corrosion (body)

+1 The same for all series

Minimal outgassing

Low outgassing makes it possible to use a lower capacity pump and also shorten exhaust time.

Minimal contamination from heavy metals

The valve does not contain heavy metals such as Ni (nickel) or Cr (chrome) and it’s low sputtering yield also helps to minimize the heavy metal contamination of semiconductor wafers.

New

A heat-resistant 2-color indicator solid state auto switch is available for models with a heater. (Option)

- Ambient temperature: Max. 150°C (Sensor)
- 2-color indicator

An optional heater is available.

For 100/120°C

Auto switches are mountable from 4 directions.

**How to Order**

**XLA**

1. **Flange size**
   - Size: 16, 25, 40, 50, 63, 80

2. **Flange type**
   - Symbol: Nil, D
   - Type: KF (NW), K (DN)
   - Applicable flange size: 16, 25, 40, 50, 63, 80

3. **Indicator/Pilot port direction**
   - Symbol: Nil, A
   - Flange side

4. **Temperature specifications/Heater**
   - Symbol: Nil, H0, H4, H5
   - Temperature: 5 to 60°C, 5 to 150°C
   - Heater: With 100°C heater, with 120°C heater

5. **Auto switch type**
   - Symbol: M9
   - Model: (M)(L)(Z)
   - Remarks: Reed auto switch (Not applicable to flange size 16)

6. **Number of auto switches/Mounting position**
   - Symbol: Nil, A, B, C
   - Quantity: 2, 1
   - Mounting position: Valve open/closed, Valve open

7. **Body surface treatment/Seal material and changed parts**
   - Symbol: Nil, A
   - Surface treatment: External: Hard anodized, Internal: Raw material
   - Seal material: Compound no.

8. **Part with changed seal material and leakage**
   - Symbol: Nil, A
   - Changed part: (2), (4)
   - Leakage: [Pa·m³/s or less]

---

*Seal material*

- Nil
- KF
- EPDM
- Barrel Perfluoro®
- Kalrez®
- Chemraz®
- VMQ
- FKM for Plasma

*Body surface treatment*

- Nil
- External: Hard anodized
- Internal: Raw material

To order something other than Nil (standard), list the symbols starting with X, followed by each symbol for body surface treatment, seal material, and then changed part.

Example: XLA-16-2M9NA-XAN1A

*† Conductance is the value for the elbow with the same dimensions.

Construction/Operation

With solenoid valve

<Working principle>
By applying pilot pressure from the pilot port, the piston-coupled valve overcomes the force of the spring or operating force by pressure, and the valve opens.
In the case of the XLAV, port 1(P) is normally pressurized, and the valve opens when the solenoid valve is turned ON and closes when it is turned OFF.

<Option>
Auto switch: The magnet activates the auto switch. With 2 auto switches, the open and closed positions are detected, and with 1 auto switch, either the open or closed position is detected. The temperature range is only available for general use (5 to 60°C).
Heater: Heating is performed simply using thermistors. The valve body can be heated to approximately 100 or 120°C, depending on the size of the product. The type and number of thermistors to be used will vary depending on the size and setting temperature. For the high-temperature type, the bonnet assembly is a heat-resistant structure.
Indicator: When the valve is open, a marker appears in the center of the upper surface of the bonnet.

† Refer to Maintenance Parts on page 24.

*1 Conductance is the value for the elbow with the same dimensions.

Construction/Operation

<Working principle>
By applying pilot pressure from the pilot port P-1, the piston-coupled valve overcomes the operating force by the pressure, and the valve opens. (Pilot port P-2 is open.) Alternatively, by applying pilot pressure to pilot port P-2, the valve closes. (Pilot port P-1 is open.)

<Option>
Auto switch: The magnet activates the auto switch. With 2 auto switches, the open and closed positions are detected, and with 1 auto switch, either the open or closed position is detected. The temperature range is only available for general use (5 to 60 °C).
Heater: Heating is performed simply using thermistors. The valve body can be heated to approximately 100 or 120 °C, depending on the size of the product. The type and number of thermistors to be used will vary depending on the size and setting temperature. For the high-temperature type, the bonnet assembly is a heat-resistant structure.
**XLC Series**

**Dimensions**

**XLC: Air operated**

**Size 16, 25, 40**

- **Model**: XLC-16-2
  - **Dimensions**: 40 x 108 x 38 x 20
  - **E** (Option)
  - **Auto switch (Option)**

- **Model**: XLC-25-2
  - **Dimensions**: 50 x 121 x 48 x 27
  - **Auto switch (Option)**

- **Model**: XLC-40-2
  - **Dimensions**: 65 x 171 x 66 x 39
  - **Auto switch (Option)**

- **Model**: XLC-50-2
  - **Dimensions**: 70 x 181 x 79 x 31
  - **Auto switch (Option)**

- **Model**: XLC-63-2
  - **Dimensions**: 88 x 206 x 100 x 39
  - **Auto switch (Option)**

- **Model**: XLC-80-2
  - **Dimensions**: 90 x 244 x 117 x 46
  - **Auto switch (Option)**

*1 The E dimension applies when the heater option is included. (Lead wire length: Approx. 1 m)

* (a), (b), (c) in the above drawing indicate heater mounting positions. Moreover, heater mounting positions will differ depending on the type of heater. For details, refer to Common Option [2] Mounting position of the heater on page 17.

With solenoid valve: Option specifications/Combinations
This model has indicator, auto switch, and K (DN) flange options, but high-temperature/heater options are not available.

Example: SYJ319, XLFV-50, 63, 80: SYJ519

For option “Q,” the solenoid valve should be a CE-compliant product.

\(^*1\) Conductance is the value for the elbow with the same dimensions.
\(^*2\) A coating of vacuum grease [Y-VAC2] is applied to the seal-material sliding portion of the vacuum part.

Construction/Operation

<Working principle>
By applying pilot pressure from the pilot port, the piston-coupled valve overcomes the force of the spring or operating force by pressure, and the valve opens. In the case of the XLFV, port 1(P) is normally pressurized, and the valve opens when the solenoid valve is turned ON and closes when it is turned OFF.

<Opption>
Auto switch: The magnet activates the auto switch. With 2 auto switches, the open and closed positions are detected, and with 1 auto switch, either the open or closed position is detected. The temperature range is only available for general use (5 to 60 °C).
Heater: Heating is performed simply using thermostats. The valve body can be heated to approximately 100 or 120 °C, depending on the size of the product. The type and number of thermostats to be used will vary depending on the size and setting temperature. For the high-temperature type, the bonnet assembly is a heat-resistant structure.
Indicator: When the valve is open, a marker appears in the center of the upper surface of the bonnet.

* The inrush current of the heater flows for several tens of seconds when using 100 V, while it flows for several seconds when using 200 V. However, this inrush current will decrease shortly after.
* When the product uses multiple heater assemblies, do not turn on the power to each heater assembly at the same time. Turn on the power to each heater assembly one-by-one at intervals of 30 sec. since the inrush current is large.
* The heater temperature will decrease several % from the start of heating and then becomes stable. (The heater temperature may decrease approximately 5 to 10% due to individual differences.)
* For mounting, refer to the Specific Product Precautions 2 on page 22. For details about quantity and type, refer to Maintenance Parts in the Specific Product Precautions 4 on page 24.

Specific Product Precautions 1

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For auto switch and 3/4/5 port solenoid valve precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: http://www.smcworld.com

---

**Piping**

⚠️ **Caution**

1. **Refer to the Fittings & Tubing Precautions on the SMC website for handling One-touch fittings.**
2. **Preparation before piping**
   Before piping is connected, it should be thoroughly flushed out with air or washed to remove chips, cutting oil, and other debris from inside the pipe.
3. **Winding of sealant tape**
   When connecting pipes, fittings, etc., be sure that chips from the pipe threads and sealing material do not enter the valve. Furthermore, when sealant tape is used, leave 1.5 to 2 thread ridges exposed at the end of the threads.

---

**Air Supply**

⚠️ **Caution**

1. **When extremely dry air is used as the fluid, degradation of the lubrication properties inside the equipment may occur, resulting in reduced reliability (or reduced service life) of the equipment. Please consult with SMC.**
2. **Install an air filter.**
   Install an air filter upstream near the valve. Select an air filter with a filtration size of 5 μm or smaller.
3. **Take measures to ensure air quality, such as by installing an aftercooler, air dryer, or water separator.**
   Compressed air that contains a large amount of drainage can cause the malfunction of pneumatic equipment, such as valves. Therefore, take appropriate measures to ensure air quality, such as by providing an aftercooler, air dryer, or water separator.
4. **Ensure that the fluid and ambient temperatures are within the specified range.**
   If the fluid temperature is 5°C or less, the moisture in the circuit could freeze, causing damage to the seals and equipment malfunction. Therefore, take appropriate measures to prevent freezing.

---

**Warning**

1. **Type of fluids**
   Please consult with SMC when using the product in applications other than compressed air.
2. **When there is a large amount of drainage**
   Compressed air containing a large amount of drainage can cause the malfunction of pneumatic equipment. An air dryer or water separator should be installed upstream from filters.
3. **Drain flushing**
   If condensation in the drain bowl is not emptied on a regular basis, the bowl will overflow and allow the condensation to enter the compressed air lines. This causes the malfunction of pneumatic equipment. If the drain bowl is difficult to check and remove, the installation of a drain bowl with an auto drain option is recommended.

---

**Air Supply**

4. **Use clean air.**
   Do not use compressed air that contains chemicals, synthetic oils that include organic solvents, salt, corrosive gases, etc., as it can cause damage or malfunction.
## XL Series
### Specific Product Precautions 2

**Be sure to read this before handling the products. Refer to the back cover for safety instructions.**

For auto switch and 3/4/5 port solenoid valve precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: [http://www.smcworld.com](http://www.smcworld.com)

---

### Air-operated Angle Valve XLA/XLC/XLF/XLG Series

#### Design

**Warning**

- **All models**
  1. The body material is A6063, the bellows are made of stainless steel 316L, and the other metal material in the vacuum section is stainless steel 304. The standard seal material in the vacuum section is FKM, but it can be changed to an other material if desired (refer to How to Order). Confirm that fluids are compatible with the materials before use.
  2. Select materials for the actuation pressure piping, and heat resistance for fittings that are suitable for the applicable operating temperatures.

- **For XLF/XLG**
  1. Vacuum grease is applied to the sliding part of the vacuum (Y-VAC2).

- **Model with auto switch**
  1. The auto switch section temperature should not exceed 60°C.
  2. For models with a heat-resistant auto switch, set the temperature of the auto switch section to 150°C or less.

- **Model with heater**
  1. For models with a heater, a device should be installed to prevent overheating.
  2. If using gases that cause a large amount of deposits, heat the valve body to prevent deposits in the valve.

- **Model with solenoid valve**
  1. For models with a solenoid valve, the temperature of the solenoid valve section should be no greater than 50°C.

#### Caution

- **All models**
  1. In high-humidity environments, keep valves in packaging until the time of installation.
  2. For models with an auto switch or solenoid valve, secure the lead wires so that they have sufficient slack, without any unreasonable force applied to them.
  3. Perform piping so that excessive force is not applied to the flange section. When there is vibration of heavy objects, attachments, etc., secure them so that torque is not applied directly to the flanges.
  4. Vibration resistance allows for normal operation up to 30 m/s² (45 to 250 Hz), but continuous vibration may cause a decline in durability. Arrange piping to avoid excessive vibrations or shocks.

#### Selection

- **All models**
  1. For high vacuum valves used in the main exhaust lines of flat panel display manufacturing equipment and other large manufacturing equipment, the XLF(V) or XLG(V) series, which employ O-ring seals for improved durability, is recommended.
  2. When controlling product responsiveness, take note of the size and length of piping, as well as the flow rate characteristics of the pilot solenoid valve.
  3. Pilot pressure should be kept within the specified range. 0.4 to 0.5 MPa is recommended.
  4. Use within the operating pressure range.
  5. Use within the operating temperature range.
  6. The actuating piston chamber and the bellows chamber are directly connected to atmosphere. Use in an environment where dust emissions will not cause problems. (Please consult with SMC if the release of dust must be avoided.)
  7. If a product without auto switches (other than the built-in magnet type) is selected, please note that an auto switch cannot be retrofitted.
  8. For models with a solenoid valve, keep residual voltage leakage to 3% or less of the rated voltage for DC and 8% or less of the rated voltage for AC.

---

### Mounting

**Warning**

- **All models**
  1. The body material is A6063, the bellows are made of stainless steel 316L, and the other metal material in the vacuum section is stainless steel 304. The standard seal material in the vacuum section is FKM, but it can be changed to an other material if desired (refer to How to Order). Confirm that fluids are compatible with the materials before use.

- **For XLF/XLG**
  1. Vacuum grease is applied to the sliding part of the vacuum (Y-VAC2).

- **Model with auto switch**
  1. The auto switch section temperature should not exceed 60°C.
  2. For models with a heat-resistant auto switch, set the temperature of the auto switch section to 150°C or less.

- **Model with heater**
  1. For models with a heater, a device should be installed to prevent overheating.
  2. If using gases that cause a large amount of deposits, heat the valve body to prevent deposits in the valve.

- **Model with solenoid valve**
  1. For models with a solenoid valve, the temperature of the solenoid valve section should be no greater than 50°C.

### Caution

- **All models**
  1. In high-humidity environments, keep valves in packaging until the time of installation.
  2. For models with an auto switch or solenoid valve, secure the lead wires so that they have sufficient slack, without any unreasonable force applied to them.
  3. Perform piping so that excessive force is not applied to the flange section. When there is vibration of heavy objects, attachments, etc., secure them so that torque is not applied directly to the flanges.
  4. Vibration resistance allows for normal operation up to 30 m/s² (45 to 250 Hz), but continuous vibration may cause a decline in durability. Arrange piping to avoid excessive vibrations or shocks.

---

**SMC**

22
Air-operated Angle Valve XLA/XLC/XLF/XLG Series

**Caution**

1. Before mounting, clean the flange seal surface and the O-ring with ethanol, etc.
2. There is an indentation of 0.1 to 0.2 mm in order to protect the flange seal surface, and it should be handled so that the seal surface is not damaged in any way. When using an outer ring, be sure that the O-ring is compressed sufficiently. (There is basically no problem with the outer ring.)
3. Exhaust direction
   During operation, the direction of the exhaust may be determined freely, but in cases where a flow is generated by the exhaust, a decline in durability may result.
   The exhaust direction shown in the figure below (bellows side exhaust) is recommended.
   Take all available precautions, as the life of the equipment is affected by the conditions of usage.
4. Valves may not be able to be mounted depending on the piping material type (clamp, etc.). Be sure to check the piping material before use.

**Recommended exhaust direction**

(Vacuum pump connected on bellows side)

1. When the solenoid valve with a DC type light/surge voltage suppressor is electrically connected, check whether there is polarity.
   If there is polarity, incorrect polarity may cause damage to the elements inside the valve or power supply equipment, and malfunction may result.
2. When electric power is connected to the solenoid valve, be careful to apply the proper voltage. Improper voltage may cause a malfunction or the coil to burn out.
3. After completing the wiring, confirm that the connections are correct.
4. Secure the lead wire of the switch so that it has sufficient slack, without any excessive force applied to it.

**Warning**

If there are any concerns about safety in regards to the fluid or reaction product (deposit) have someone with sufficient knowledge and experience (a specialist of the field) disassemble, clean, and assemble the products.

**Caution**

1. When removing deposits from a valve, take care not to damage any of its parts.
2. Replace the product or bonnet assembly when the end of its service life has approached.
3. If damage is suspected prior to the end of the product’s service life, perform early maintenance. If there are scratches, dents, or cracks on the seals (bellows or valve) due to handling or operating conditions, replace the parts.
   For maintenance parts, refer to Construction or Maintenance Parts.
4. SMC specified parts should be used for service.
5. When removing valve seals or exterior seals, take care not to damage the sealing surfaces. When installing the valve seal or exterior seal, be sure that the O-ring is not twisted.
6. When the bellows assembly is replaced, do not hold the bellows directly.

* The at the end of the solenoid valve part number is the selection symbol for voltage, electrical entry, and other specifications. For details about selection symbols, refer to the Web Catalog.

* The plate assembly includes the plate, gasket, and mounting screws.
These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)\(^1\), and other safety regulations.

\(^1\) ISO 4414: Pneumatic fluid power – General rules relating to systems.
ISO 4413: Hydraulic fluid power – General rules relating to systems.
IEC 60204-1: Safety of machinery – Electrical equipment of machines.
(Par 1: General requirements)
ISO 10218-1: Manipulating industrial robots – Safety, etc.

### Safety Instructions

**Caution:** Indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

**Warning:** Indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

**Danger:** Indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

### Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.
   Since the product specified here is used under various operational conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.
   The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.
   1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the objects have been confirmed.
   2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
   3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
   1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
   2. Installation on equipment in conjunction with atomic energy, railways, airfields, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
   3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
   4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

### Caution

1. The product is provided for use in manufacturing industries.
   The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

### Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”. Read and accept them before using the product.

**Limited warranty and Disclaimer**

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.\(^2\)
   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.

3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

\(^2\) Vacuum pads are excluded from this 1 year warranty.
A vacuum pad is a consumable part, so it is warranted for a year after its delivery. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

**Compliance Requirements**

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.

2. The exports of SMC products or technology from one country to another are assured that all local rules governing that export are known and followed.

**Caution**

SMC products are not intended for use as instruments for legal metrology.
Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

### Revision History

**Edition B**
- The XL/C/F/G series has been added.
- Number of pages increased from 12 to 24.

**Edition C**
- The XLAV-2/FV-2 has been added.
- Heat-resistant 2-color indicator solid state auto switch has been added to the high-temperature type.
- Number of pages increased from 24 to 28.

**Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.**
